Assessor Comments
A good mob of commercial quality first calf heifers. One heifer has fly mark on her neck as can be seen in photos. Calving in a good window mostly between 4 and 7 months in calf these heifers would be useful to trade as cows and calves or keep as future breeders. These heifers come from an area where GRT is present, however most of them have never left the pen and all of them have been in a pen on a hay and silage ration for at least 28 days.
