Assessor Comments	Top quality line of PTIC angus females 2020 drop. They present even as a group and in slightly forward condition. They are bred from a very good local self replacing angus herd and all progeny are proven performers amongst previous purchasers. Cows were joined for a 8 week period and these cows were identified as later cycling. As a result of this, they should calve in a tight period(2-3 weeks) at beginning of October. They are well grown for their age, carry a clean bill of health and this represents an annual sale of surplus females. Please note vendor offering various lines across two farms with a total of 86 females on offer.
