Good to handle as they flowed through gateways, pound, up the race and over scales. They were ‘pushy’ in the race at times however not detrimental, once back in mob they settled down well.

Assessor Comments	Genuine herd dispersal as property has been sold. These heifers will go onto complement any breeding herd. Plenty of calf showing in the dry heifers, although it’s dry currently when joined last October to February the season was fresh and healthy. As such vendors expect this paddock of heifers to be as fertile as previous years. Although this season the herd wasn’t preg tested, you can buy with confidence your getting healthy young breeders. They are generally well grown maidens with the majority medium framed, a few large frame & a few small frame, as can be seen by the weights & photos. These breeders are due to finish calving by the 19th of November approximately.They were pre treated for ticks with Dectomax injectable 25/10. This line suits breeding on with or fattening & splitting. I recommend this line of maiden station mated heifers and calves.
