Cows were very good to handle through the yards & crush.

Handled With	Bikes , On foot , Vehicles

Notable Traits

	Traits
3 Head	White markings in front of flanks

Assessor Comments	56 PTIC Rennylea Angus blood cows. They are 6.5 years of age (August 2019 drop). With calves only being weaned 1-2 weeks cows present in prime condition Averaged 715kg full at assessment (630-902kg). These cows have been scanned in calf every year with dry cows sold annually. PTIC and fetal aged to calve in the first 4 weeks of the joining cycle, to commence calving late July/August to high indexing Rennylea Angus sires, with the Hearn family targeting bulls with high 400 day growth, high IMF, calving ease, and must have near perfect structure, and it shows in these cows as they are large framed matrons with great structural soundness. This is the lead draft of the 2019 drop cows with a 25% tail removed at assessment to make a neat B-double load. Anyone looking to get a herd started you couldn't look past the genetics of these cows, with 30 years of Rennylea Angus genetics behind them they would form a strong foundation and get you started off on the front foot.
