Comment on Fat Score 1 Sheep

Fresh and forward, improving as lambs weaned on day of assessment

Mulesed

No

Shearing Info

Shorn 05 Feb 2024 Not Crutched

Wool Length

100% 0 - 0.25"

Majority Length

3 Millimetres

Degree Burr

Very Light Type: Clover

Degree Seed

None Observed

Shedding Breed Contact

No known contact with shedding breeds

Skin Comment

Mostly clean healthy skins, odd scarring from photosynthesis issues in the spring. Healing well, hard to see. Possible small healed fly scar.

| Any Access To Rams or Stags? | To vendor's best knowledge, this lot has had no access to rams or stags.                                                                                                                                                                                                                                                                                                                                                                                   |                   |           |            |
| Assessor Comments            | Annual sale of the Howe Highlander ewes. All of these ewes had lambs last season and have been weaned on the day of assessment. Highly fertile flock, averaging 175-180 % most years. Ready to join to the ram of your choice. Ewes in the prime of life ready to go and produce lambs. Please note there is the odd ewe with symptoms from a photosynthesis issue in the past, like scarred ears. But not having any effect on the ewes ability to breed. |                   |           |            |
