Temperament

Yards	Crush	Paddock
Quiet: 44 head Slightly Stirry: 4 head	Quiet: 29 head Stirry: 19 head	Temperament not assessed in Paddock

Like most cattle in our region some can become agitated under pressure or in the crush, we noted 19. It needs to be noted that this agistment paddock had substandard yard and crush which contributed to their agitation (photo included). Once exiting the crush they settled with the mob and were happy to have me walk among them to take photos and video.

Handled With	Bikes , Dogs , Horses , On foot

Notable Traits

	Traits
3 Head	Fly Bite

Assessor Comments	A very attractive line of heifers, would kill out extremely well however it would a shame to miss the opportunity with their breeding potential. We have a mix of breeds and colours as the photos illustrate. The vendor prides themselves in their tight calving patterns and benefits of a long time focusing on fertility. Historically they have had results above 90% conception in heifers with the same joining window. While in ticky country the cattle presented without any heavy tick burden. These cattle are not pre treated for tick. Nyoola is a coastal property, like most in the region they have had exposure to Lantana and a reputation of high performance wherever they go.
