|                        | These steers have perhaps not had the education at weaning that we would of liked although through out there time they have been moved with both side by side and dogs they are respectful but free flowing. As expected for young cattle there is the odd steer when put under pressure will react but overall good to handle. I did not handle these steers in the paddock.                          |                                                             |                                     |

| Assessor Comments      | 20 yearling Angus cross steers, appearing to be 12 to 13 months of age give or take and averaging 261kg at assessment after a 14 hour curfew. Steers are forward store condition and as shown in the photos these steers are right on the turn dropping there coat. These steer will excel in the future as grass feed feeders right through grass/grain fed both domestic or export slaughter steers. |                                                             |                                     |
