	These heifers were responsive to pressure. They were settled on the scales with only the odd one being unsettled. They flowed through the yards well. They were settled for the video (see attached) following assessment.

Assessor Comments	Offering the 2024 drop weaners off Barrabooka due to the sale of the property. The Barrabooka herd was originally developed on Tuwharetoa Angus (Tarcutta) genetics before transitioning to Hazeldean Angus approx 10 years ago. These heifers are the tops of the drop, out of large framed, big boned, deep bodied cows with presence and sired by Hazeldean and Dunoon sires. Well weaned and offering immediate compensatory weight gains with a change in diet. They are currently being supplemented silage and running with their brothers until delivery. Given the current summer conditions pink eye is about and the odd weepy eye would be expected at delivery. 5 head were treated at assessment and appeared to be clearing up. Should any not be recovering by delivery they will not be loaded. These heifers are from the heart of the herd with a tail removed. They are not classed presenting a range of options for purchaser. Vendor is offering the brothers in today's sale as well as the spring drop weaners.
