|                        | Cattle in the paddock are quiet to move around. In the yards cattle moved well off pressure while two heifers seemed slightly stirry and moved off pressure more so than the others. Heifers lead up the race fine and were no troubles assessing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                             |                 |

| Assessor Comments      | 28 Angus X Angus PTIC Heifers in calf to a vendor bred bull - Oakley Angus. Heifers exhibit great weight for age, structure and length. Heifers are to calve commencing mid August for an 8 week window. Heifers returned to fresh native pastures where they have been averaging 1.11kg ADG (Optiweigh/Gallagher). Heifers weighed 458kg - 562kg to average 506kg FULL. Preg tested my John Bowan Coolah vets. Bull bloodlines are Gilmandkye and Bowen blood. Vendors purchase their bulls based on a balance of postive IMF, 200 day growth, postive EMA and calving ease producing progeny that will provide a greater carcass for eating quality. Heifers are in forward condition and present a great buying opportunity for the buyer to calve down for a trade or increase their breeding numbers. |                                                             |                 |
