|                                       | Heifers were a pleasure to handle at assessment. Heifers are well educated due to being in feedlot environment. Cattle were handled in the paddock along with yards are and managed by experienced stockman. They are run in large mobs and are also broken to dogs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                        |                                                                   |           |     |      |     |

| Assessor Comments                     | Excellent quality line of weaned Sept/Oct drop heifers. Heifers are the tops of the drop with no heifers from this drop being retained. Excellent opportunity to acquire top shelf genetics. Heifers are bred from genuine large frame big capacity females and a herd with excellent fertility. Total of 415 heifers on offer. They present in fresh forward store condition and are ideal future breeders. They show all the quality attributes the angus breed desires and would be a welcomed addition to any herd. Please note approx 5% of total mob show some very small eye scarring(very minimal) along with approx 15% carrying some old ringworm scarring. Both of which not detrimental. Please note all heifers will be reweighed at delivery for buyer confidence. Please view video to fully appreciate the quality of these females. |                                                                        |                                                                   |           |     |      |     |
