Assessor Comments	A line of predominatly good quality Angus and Angus x steers. They are a mix of vendor bred and purchased steers. Purchased steers from two sources were mouthed at assessment will all 22 milk tooth. The balance of vendor bred steers and those purchased as weaners from a family member in northern NSW should all comfortably still be milk tooths. Note the presence of Angus x steers in the line with either scurrs, a non traditional Angus head structure, curley hair or very slight pizzle. They should all be able to go into a market taking 75% Angus to 100 % Angus steers. See Photos or speak to assessor for clarification. Note - photos were taken approx 60% of the way through the draft due to low sunlight - they are representative of the sale mob. With medium to large frame they suit to background on crop to export feeder weights or take directly onto feed. LWR at assess 318 - 407 kg full weight. Please note these cattle are in a tick free zone and are free to travel to tick free areas.
