Heifers were settled in big yard. During the assessment process a % of heifers became slightly unsettled when pressure was applied and when confined will being weighed. A small% were agitated when confined, all heifers were quick to resettle when released back into mob. If excessive pressure was applied while working heifers through yards they

| Assessor Comments | Buyers a line of vendor bred Angus heifers presenting in forward condition that have an estimated average delivery weight of 269.8kg. Heifers have a wealth of genetics and are up to date with all health treatments. Heifers are currently being fed a silage grower ration in the paddock so would be ideal to continue to feed for the domestic or heavy export slaughter market. A large % of heifers would also to suitable to retain as breeders. Please note; Large % of heifers with light ringworn. Not considered detrimental. |
