Assessor Comments	A complete age drop of ewe hoggets, with a light tail drafted out of the bottom end. They are April/May 2024 drop, mts, nsm. They were shorn on the 8th of August, producing a 17.6 micron fleece. They are Kamora Park bloodlines, both on the Sire and the Dam side as well. Very rarely do you see these ewes being put on the market, hence an ideal opportunity to invest in some top line genetics. They are part of a flock reduction program, to make way for an extensive pasture regeneration exercise. The vendor has been a very fastidious woolgrower over many years, and always operates at the very top end of the ram sales. These ewe hoggets will grow into massive breeding ewes, with a high quality fleece on the back. Owing to the season, they will currently present as a mainly medium to good medium frame, in store to forward store condition. Show them a good season, and watch the difference.
