	Bikes , On foot , Vehicles		
	Traits		
	2 Head 2 heifer calves treated with Orbenin, for pinkeye infection in one eye at assessment		
Assessor Comments	4 Head Slight white on udder/underline of 4 cows		
	A nice line of well grown, station-mated Angus heifers with their first calf at foot, & a real chance of being back in calf to their second. These heifers are well developed, exhibiting good frame for age & plenty of stretch. They are producing good milk, which is evident in the condition of marked & vaccinated calves at foot, which are 8-16 weeks of age & exhibiting excellent shape, being sired by high indexing Bongongo Angus bulls. These heifers are displaying the characteristics & traits of being well bred, & are presenting in fresh condition. Cows & calves alike, having been showing good weight gains on the forage crop, which is now coming to the end of its cycle, so its time to move them on. A great opportunity to secure a quality line of young, station mated Angus breeders at the height of their production. With prime old cows currently selling well, they offer real value & an attractive change-over opportunity into younger breeders.
