Comment on Fat Score 1 Cattle Cows range from good strong condition right down to backward store. They are strong enough and will travel OK if correct procedures are followed, but care would be needed to transport them and the calves over any significant distance.

Assessor Comments A mostly good to very good quality line of mixed crossbred cows with calves at foot. Calves are by good quality Angus bulls and all are black bar one creamy. These cows are really working hard on rearing their calves and are showing the strain of doing so in a very dry season. Also these cows have reared a calf every year since they were purchased. The cows have been continuously joined to Angus bulls, Raff and Lawson and Moorobie bulls. The calves have been sired by good quality Angus bulls and ranged from 45 to 206 kg to avg 135kg, all were individually weighed. All cows were mouthed at assessment, with all good sound mouth in this assessment with just one cow showing some wear on her teeth. Feet, eyes and udders are in line with what to expect with cows this age. They all have been run in a cell grazing operation and are familiar with electric fences.
