|                                       | These cows were easy to handle. The odd cow was a bit quick when singled out but settled in the mob. During assessment all cows were mouthed and it more than often upsets the recipient. As a result some cows were naturally unsettled over the scales.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                         |                             |            |

| Assessor Comments                     | Offering 49 Angus and Angus cross mixed age cows station mated to proven Cottage Creek Angus sires. These cows were purchased in as a part herd reduction sale via the Tamworth saleyards. They were sold as 2-8 years of age and consisted of vendor bred and purchased cows. They had calves weaned the day of purchasing, were station mated and presenting in light store condition due to the tight seasonal conditions. They have improved out of sight since arriving and have been on a rising plane of nutrition to date. They were drenched, vaccinated with 5 in 1 and received an AD and E, B12 and Multimin shot after they were healthy enough to be handled after arrival. They were preg tested empty on 27/05 with bulls then joined from the 30/05 for 7 weeks. It is being assumed they have been cycling as bulls have been actively working and they are visually gaining fat cover. 100% were mouthed at assessment with any broken or faulty mouths removed to be sold. The balance represent the ages listed and would all be capable of rearing this calf and another if needed. They averaged 450kg after being yarded early in the morning for assessment. The lightest of the weights at assessment were the younger heifers (2 and 4 tooth's) in the line. Presenting the opportunity for a trade at a low value entry level for anyone looking to utilise excess feed and make a dollar. Reasonably reserved. Please note the PTIC sisters are being offered in today's sale also. |                         |                             |            |
