Comment on Fat Score 1 Cattle

Cows had weaners pulled off them 3 weeks ago, cows are picking up in condition since. As these cows are in lighter condition and pregnant they would benefit from spelling if travelling greater than 1000 km.

Vendor Bred

No

Vendor has owned stock for More than 12 months

Stock History

57 head vendor bred 31 purchased cows

Lifetime Traceable	2 Orange Post-Breeder tags that were observed in cows

	Stirry: 3 head		Stirry: 6 head
Assessor Comments	These PTIC cows are offered in a tight 2-month joining window and have been traditionally culled on fertility, with only females that have consistently produced and raised a calf each year retained in the herd. They are due to commence calving at the end of December and are joined to Angus, Santa Gertrudis and Brangus bulls. All cows have been pregnancy tested by a veterinarian and are currently 3–5 months in calf. Note that whilst bulls were left in until early June, all cows are confirmed 3 months or greater PTIC. The age range is 3–9 years, with approximately 50% being under 4 years of age. Around 65% of the cows are vendor bred. These cows have had a weaner removed three weeks ago hence they are in store condition. A small percentage display fly scarring, and one cow has a pendulous naval. Buyers please note the vendor is also offering another lot of cows in the same auction.
