Assessor Comments	These PTIC cows are offered in a tight 2-month joining window and have been traditionally culled on fertility, with only females that have consistently produced and raised a calf each year retained in the herd. They are due to commence calving at the end of December and are joined to Angus, Santa Gertrudis and Brangus bulls. All cows have been pregnancy tested by a veterinarian and are currently 3–5 months in calf, 40% being 5 months, 36% being 4 months and 24% being 3 months. Note that whilst bulls were left in until early June, all cows are confirmed 3 months or greater PTIC. The age range is 3–9 years. All of these cows (except 1 no 4 heifer) have had a weaner removed three weeks ago hence they are in store condition. A small percentage display fly scarring, and one cow has an udder with teats slightly enlarged at the top. Buyers please note the vendor is also offering another lot of cows in the same auction.
