Assessor Comments	A small line of 2 and 3 year old Charinga blood ewes with 70% marked lambs at foot. Ewes were shorn early April and the lambs marked at the same time. As the rams are running with the ewes all the time, its highly likely the ewes without lambs at foot are joined, however they have not been scanned. As seen in the photos there's a couple of ewes that have had a touch of fly at shearing time. If you have feed there would be plenty of upside in these ewes and lambs.
