|                       | Cows flowed through then yards without trouble. They were a little sour flowing through the race but only due to being pregnant tested the week prior. Couple of cows became agitated when placed under severe pressure but settled quickly when removing the pressure source.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |                         |     |                             |     |                 |     |

| Assessor Comments     | Buyers, a great opportunity to purchase two decks of EU Cows & Calves with only 7 head remaining to calve over the next two months. These cows are medium to large frame and have been honest breeders for the vendor. Cows have a LWR of 415kg to 624kg at assessment and will have a delivery weight of 509kg curfewed. The majority of these cows are #0's & #1's but are strong enough to have a couple more calves or to do a split trade on them. The cows are doing an excellent job on the calves with an average weight of 117kg. The seven remaining cows are PTIC to Charolais or Angus bulls and are 6 to 8 months in calf. The vendor has pretreated these cattle at assessment and will re dip cattle again on Friday 15th October to assist tick free buyers in clearings process. |     |                         |     |                             |     |                 |     |
