| Assessor Comments            | Good fresh lambs with plenty of length and frame to develop into good roomy ewes. These sheep have handled a very wet winter and have the genetic to handle more arid conditions. Flock has originated from wheatbelt and seemed to have handled the transition to a wet climate extremely well and going on to provide 134% lambing.                                                        |     |                |      |               |      |                 |      |
