Assessor Comments	A good line of merino lamb & hogget ewes being offered as part of the breeder's annual sell off. The ewes cut 3kg after 7 months of wool growth. They could suit a six monthly shearing program. The ewes are August/ September 2020 drop, September 2021 shorn, Hilltop blood. The Gundawanna flock has been rigorously classed over a number of years by Adam Mort. This has been a non mulse flock for eight years. The ewes are improving in condition, grazing on improved pastures. The wool on these ewes is bright and white. Approximately 3% are showing signs of slight wool rot over the shoulders due to the extremely wet conditions. Ewes average weight at assessment was 50.3 kg. A small tail has been removed. The ewes have a purple NLIS tag with a V, indicating Gudair vaccination. Due to the extremely wet conditions (record November rainfall) the ewes were run through a foot bath of zinc sulphate 3 weeks ago and will be done again prior to delivery.
