| Skin Comment           | Fresh pink skins. At assessment there was one in this run with a black patch on its back. Also it was assessed that approximately 2% of wethers have deromitis.                                                                                |
| Wool Comment           | Very little Erodium was noted in these lambs. This has just occurred as the seed head is still just sitting the wool. Best efforts by the client will be taken to keep to a minimum until delivery. These lambs have been wigged and crutched. |
